- **Software and Tools:** Jupyter Notebook, MongoDB, Git, Linux, R Studio, IntelliJ IDEA, Android Studio, Figma.

EDUCATION

University of Alberta

Edmonton, AB

Bachelor of Science: Computing Science with Honors

Sep 2023 – Expected June 2027

- **GPA:** 3.82/4.0
- International Admission Scholarship recipient | Regional Excellence Scholarship recipient.
- **Relevant coursework:** Algorithms, Probability Theory and Sampling, Applied Statistics, Machine Learning, Software Development.

EXPERIENCE

University of Alberta

Edmonton, AB

Student Volunteer

October 2024

- Represented the Computing Science department, engaging with prospective students to provide guidance and answer inquiries about undergraduate programs, highlighting opportunities within the faculty.

UAlberta Book Club

Edmonton, AB

VP of Marketing

May 2025 - Present

- Helped organize events and coordinate weekly meetings for club members. Responsible for creating promotional materials and social media campaigns.

SELECTED PROJECTS

Social Media Application

November 2024

Languages and Frameworks: Python, SQLite

- Worked as a team of 4 using Python to build a mini social media platform with a command-line interface, enabling user authentication, tweet creation, following, and search functionality.
- Implemented robust validation for login/signup processes to enhance user experience and data accuracy. Ensured secure database operations as well as using parameterized queries to prevent SQL injection.

Web-Based Document Editor

June 2025

Languages and Frameworks: React, Node.js, PostgreSQL

- Built a web-based text editor with full styling capabilities, implementing a RESTful API with Node.js to handle user authentication, as well as document saving and loading via asynchronous database operations.

Android Event Lottery Application ▸ Watch video demo

October - December 2025

Languages and Frameworks: Java, Firebase, XML

- Designed and developed an Android event lottery app using Java and Firebase in a team of five. Created a custom UI with XML and fragment logic, and implemented Firestore operations for real-time event/attendee data and QR check-ins.
- Built full admin/participant/organizer workflows with automated notifications, and integrated CI/CD pipelines with automated unit tests to validate functionality and streamline deployments.
